

Strategy Overview

The Strategy seeks long-term growth of capital with downside risk reduction. The Strategy utilizes the managers' proprietary QuantActive™ investment approach, which seeks to unite the distinctive strengths of quantitative and traditional portfolio management. The managers seek to combine quantitative discipline with active insights to manage risk and enhance stock selection.

Portfolio Construction

- Concentrated, high conviction portfolio of 30+ large capitalization US companies that demonstrate accelerating revenues and earnings as well as technical strength
- Flexibility to use growth, core, and value stocks
- High historic active share
- May also invest up to 15% in ADRs

Why Allocate to This Strategy

Core US Equity Holding: The Strategy aims to outperform large-cap indices across market cycles with less risk, and has the flexibility to seek opportunities across styles.

Complement to Indices: The highly active approach may complement passive core equity holdings by focusing on stocks that demonstrate both business momentum and stock price momentum.

DISCLOSURES

F/m Investments, LLC (d/b/a, Integrated Alpha) is an investment adviser registered under the Investment Advisers Act of 1940. Registration as an Investment Adviser is no indication of any level of skill or training. The information presented herein is general in nature and is not designed to address your investment objectives, financial situation or particular needs. Prior to making any investment decision, you should assess or seek advice from a professional regarding whether any particular transaction is relevant or appropriate to your individual circumstances. Although taken from reliable sources, Integrated Alpha cannot guarantee the accuracy of information received from third parties. The information is current as of the date of this presentation and is subject to change at any time, based on market or other conditions.

The preceding performance represents a composite of all managed accounts, both fee-paying accounts and non-fee-paying proprietary accounts, utilizing the F/m Integrated Alpha Large Cap Focused Strategy (the “Strategy”) managed by Francisco Bido, lead portfolio manager of Integrated Alpha Investments, since the inception of the Strategy at a prior firm. All accounts became fee-paying when the predecessor firm was restructured into Integrated Alpha in 2020.

Performance is time-weighted for each performance period and reflects the reinvestment of dividends and other earnings. Gross performance is net of all trading and operational expenses, including brokerage, administrative, interest, and custodial costs. Pro forma net performance illustrated herein assumes a 0.60% annual management fee, with fees deducted from historical gross returns on a pro rata monthly basis. Investment Advisory fees are described in the Integrated Alpha ADV Part 2A.

Actual results of individual accounts and products utilizing the Strategy, as well as account holdings, may vary due to client cash flows, timing of implementation, different custodians, the availability of underlying securities, regulation, and other factors. Small accounts may underperform other accounts utilizing the Strategy due to the potentially greater impact of transaction costs.

Historical performance was affected by material market and economic conditions that were independent of and not controlled by F/m Investments, LLC or Integrated Alpha Investments and may be different in the future.

The holdings in the Strategy may differ significantly from the securities that comprise the index. For example, the Strategy has significantly fewer positions than found in the index. The index has not been selected to represent an appropriate benchmark with which to compare an investor’s performance, but rather is disclosed to allow for comparison of the investor’s performance to that of certain well-known and widely recognized index. You cannot invest directly in an index.

The Top 10 holdings shown are based off the largest ten positions (as a percentage of portfolio assets) as of the date indicated and do not correspond to any performance metric. This list is provided for informational purposes and does not constitute advice to purchase or hold securities shown. Number of holdings excludes cash and fund positions, and only one share class is counted per issuer; average weight also non-stock positions and considers the combined weight of class shares, where applicable. Position sizes and dates of security purchase may differ between accounts managed according to this strategy. The Holdings identified do not represent all of the securities purchased, sold, or recommended for advisory clients and reflect the ten largest positions strictly as of the date indicated.

All securities investing involves the risk of loss. Past performance is no guarantee of future results. There can be no assurance that the Strategy can meet its stated objectives.

Investing in the Strategy entails the significant risks of equity investing. The Strategy utilizes a limited number of securities which reduces diversification and may magnify any potential losses. The Strategy may invest in foreign securities via ADRs which can be riskier than investing in US securities. Frequent trading of the portfolio involves correspondingly higher expenses and may adversely affect the Strategy’s performance.

DISCLOSURES**Morningstar Rating**

The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The F/m Integrated Alpha Large Cap Focused Strategy was rated against the number of separately managed account strategies and for the period(s) referenced on the front page.

Index, Category and Universe

The *S&P 500 Total Return Index* is an unmanaged, capitalization-weighted index of the common stocks of 500 widely held U.S. companies, with dividends reinvested. The index is provided for informational purposes only, is not reflective of any investment, nor is it professionally managed. It is not possible to invest directly in an index. • The *Morningstar Large Growth Category*, as defined by Morningstar, contains a universe of funds that invest primarily in big US companies that are projected to grow faster than other large-cap stocks. • The *eVestment Large Cap Growth Equity Universe* consists of over 300 US equity products that primarily invest in large capitalization stocks that are expected to have an above-average capital appreciation rate relative to the market.

Glossary: Risk/Return Statistics

Alpha is a measure of the difference between a portfolio's actual returns and its expected performance, give its level of risk as measured by beta. • *Beta* is a measure of a portfolio's sensitivity to market movements. • *Correlation* is a statistical measure of how two securities move in relation to each other, based on historical data. • *Down Capture* measures the percentage of market losses endured by a portfolio when markets are down. • *Information Ratio* is a measurement of portfolio returns relative to a benchmark compared to the volatility of those returns. • *Maximum Drawdown* is the maximum loss from peak to trough for a portfolio, before a new peak is attained. • *Up Capture* measures the percentage of market gains captured by a manager when markets are up. • *R-Squared* is a statistical measure of the percentage of a fund's or security's movements that can be explained by movements in a benchmark index. R-Squared values range from 0 to 1. A high R-Squared reflects performance patterns associated with an index. A low R-Squared reflects performance patterns different from an index. • *Sharpe Ratio* compares the excess return of an investment to its volatility or standard deviation. • *Sortino Ratio* compares the excess return of an investment to its downside deviation. • *Standard Deviation*, a measure of volatility and risk, is a statistical measure of the dispersion of returns for a given security or market index.

Glossary: Portfolio Characteristics

Annual Turnover is the percentage rate at which a portfolio replaces its investment holdings on an annual basis. • *Active Share* measures the proportion of a portfolio (based on position weights) that differs from its benchmark index. • *Weighted Average Market Cap* is the average of the market capitalization of all stocks in a portfolio. • *Median Market Cap* is the midpoint of market capitalization of all stocks in a portfolio. • *P/E (price-to-earnings) Ratio* compares the current price of a stock to its per-share earnings. • *P/B (price-to-book) Ratio* compares the current price of a stock to its per-share book value. • *P/S (price-to-sales) Ratio* compares the current price of a stock to sales or revenues per share. • *P/CF (price-to-cash flow) Ratio* compares the current price of a stock to cash flow per share.
